

# 301 STAINLESS STEEL

Type 301 is an austenitic chromium-nickel stainless steel. This alloy is nonmagnetic in the annealed condition, but becomes magnetic when cold worked. 301 has a nominal composition of 17 percent chromium and 7 percent nickel. Type 301 is available annealed and in a variety of temper-rolled conditions.

High strength and excellent corrosion resistance make this versatile grade suitable for automobile trim, hose clamps, springs etc.

## Resistance to oxidation

Type 301 possesses good resistance to oxidation at temperatures up to 1550°F (840°C). At 1600°F (871°C), Type 301 exhibits an oxidation weight gain of 10mg/cm<sup>2</sup> in 1,000 hours. Therefore, this stainless steel is not suggested for use at 1600°F.

## Chemical composition

Represented by ASTM A240 and A666

| Element    | Percent by Weight |
|------------|-------------------|
| Carbon     | 0.15 maximum      |
| Manganese  | 2.00 maximum      |
| Phosphorus | 0.045 maximum     |
| Sulfur     | 0.030 maximum     |
| Silicon    | 0.75 maximum      |
| Chromium   | 16.00-18.00       |
| Nickel     | 6.00-8.00         |
| Nitrogen   | 0.10 maximum      |
| Iron       | Balance           |

## Hardness

Typical hardness values for annealed and cold-rolled Type 301 are given in the following table:

| Temper    | Brinell Hardness | Rockwell Hardness |
|-----------|------------------|-------------------|
| Annealed  | 165              | B86               |
| 1/4 Hard  | 255              | B25               |
| 1/2 Hard  | 297              | B32               |
| 3/4 Hard  | 342              | B37               |
| Full Hard | 383              | B41               |

## Mechanical properties

| Condition | UTS<br>ksi (MPa) min* | 0.2% YS<br>ksi (MPa) min* | Elongation %<br>in 2" (50.8 mm) |
|-----------|-----------------------|---------------------------|---------------------------------|
| Annealed  | 120 (827)             | 45 (310)                  | 60                              |
| 1/4 Hard  | 125 (862)             | 75 (517)                  | 25                              |
| 1/2 Hard  | 150 (1034)            | 110 (758)                 | 18                              |
| 3/4 Hard  | 175 (1207)            | 135 (931)                 | 12                              |
| Full Hard | 185 (1276)            | 140 (965)                 | 9                               |

\* Minimum - standard practice is to produce to either minimum tensile strength, minimum yield strength or minimum hardness, but not to combinations of these properties.

## Physical properties

|                                                                                  |                                          |
|----------------------------------------------------------------------------------|------------------------------------------|
| Density, lbs./in. <sup>3</sup> (g/cm <sup>3</sup> )                              | 0.285 (7.88)                             |

| in tension                                                                       | $28.0 \times 10^3$ ( $193 \times 10^3$ ) |
| Shear modulus in torsion                                                         | $11.2 \times 10^3$ ( $178 \times 10^3$ ) |
| Poissons ratio                                                                   | 0.24                                     |
| Magnetic Permeability, (H/m at 200 Oersteds)                                     | Annealed 1.02 max                        |
| Specific Heat, BTU/lbs./°F (kJ/kg/K)                                             |                                          |
| 32–212 °F (0–100°C)                                                              | 0.12 (0.50)                              |
| Melting Range, °F (°C)                                                           | 2250 – 2590 (1399 – 1421)                |

## Heat Treatments

Type 301 is non-hardenable by heat treatment.

Annealing: Heat to 1900 – 2050 °F (1038 – 1121 °C), then water quench. Stress Relief Annealing: Heat to 500 – 900 °F (260 – 482 °C), then air cool.

## Facility information

- 50 000 square foot operating facility
- 18 feet under the crane rail
- Main coil bay 280 feet in length
- Crane capacity 15 Ton
